BMW E60 – E84 – E87 – E90 3 Series 5 Series / Mini Cooper R55 – R56 ELV ESL Steering Lock Emulator Simulator No Programming Required:

BMW Mini Cooper ELV ESL steering lock emulator is used when the ELV (Steering lock) malfunctions, The ELV isn't working properly, which stops the ignition from turning on and the car from starting. The BMW ELV ESL Steering Lock Emulator Simulator can be used to resolve this issue.

How to Use the BMW MINI ELV ESL Steering Lock Emulator?

1 - Simply remove the 4 pin connector from your ELV unit. Plug the connector onto our tiny emulator and start the vehicle.

2 - If the emulator does not encounter any problems during the connection, the LED will light once. If the emulator encounters any problem, the LED lamps will blink 5 times.

BMW Mini Cooper ELV / ESL Steering Lock Emulator Features:

1 - The emulator Works on BMW E81, E82, E87, E90, E91, E92, E93, E60, E61, E63 and E64 and also covers Mini R55, R56

2 - After the emulator connections are provided, it becomes active without the need for extra hardware or installation.

3 - It can perform many operations such as locking and unlocking by accessing the CAS ELV module.

Notes:

1 - This device will NOT turn off any yellow/red steering wheel symbols. It is designed to emulate a working steering lock so you will need to reset the CAS counter or ELV counter before the lights turn off.

2 - This device will fix your problem as long as you have a FAULTY ELV. it wont fix your problem if you have a faulty CAS unit. Its your responsibility to make sure your ELV is faulty.
